

Dalton Lauerman

Gladstone, MI | 906-280-6213 | daltonlauerman@gmail.com

Objective

Software developer with over four years of experience in full stack development, enterprise systems, and data-driven applications. Proficient in .NET, React, TypeScript, C#, Python, and SQL with a strong background in regulated industries like healthcare technology. Seeking a new role to leverage technical expertise, contribute to meaningful projects, and continue professional growth in a collaborative environment.

Experience

Contract Software Developer | Menlo Innovations

March 2026 – April 2026 | Ann Arbor, MI

- Developed web and desktop applications as part of a collaborative software team using Menlo's pair programming and iterative agile methodology.
- Contributed to a data visualization tool using Matplotlib with the Qt6 library to model and render scientific data collected by NASA's IMAP space satellite, enabling researchers to explore complex datasets interactively.
- Developed a web application that integrated with the Salesforce framework to support client-facing business workflows.

Software Developer | Epic

June 2022 – November 2025 | Verona, WI

- Full stack developer on the Resolute Professional Billing team, building and maintaining web applications within Epic's Hyperspace enterprise product used by healthcare organizations nationwide in a highly regulated industry.
- Led multiple projects for the "Web Transition" company-wide initiative, designing and implementing modernized versions of existing activities using the .NET framework, React, TypeScript, and C#.
- Maintained quality and stability across a vast enterprise codebase as part of the team's Bug Fix Squad, triaging, diagnosing, and resolving defects in production software.
- Built and managed data models and ETL processes using SQL to support customer reporting needs, ensuring accurate and timely delivery of billing and operational data.
- Led on-site customer visits for research and immersion purposes, gathering requirements and translating clinical workflows into technical solutions.

Contract IT Developer | Lansing Board of Water and Light

September 2021 – March 2022 | Lansing, MI

- After completing summer internship, was asked to continue employment during the school year along with receiving a promotion to a contract developer role.
- Tested other developer's projects by writing unit tests and automated end-to-end tests using Selenium, improving code coverage and reducing regression issues.
- Contributed to the development of an Enterprise Service Bus that integrated data transfer across multiple internal systems within the organization.

IT Intern | Lansing Board of Water and Light

May 2021 – August 2021 | Lansing, MI

- Developed and deployed web applications used by both customers and internal staff for utility account management and service requests.
- Developed console applications that automated data-intensive workflows, reducing manual effort and improving processing efficiency for other staff members.

Education

Michigan State University | Bachelor of Science | Computer Science

East Lansing, MI | 2018 – 2022

- Awarded the MSU Federal Credit Union Praxis Award for the Snagit Template Creator capstone project, recognizing the most technically challenging software engineering effort.
